

MYSTOLENE FT

Leather Auxiliary Product Data

- Function** An organic filling and tightening agent for leather with a mild tanning effect.
- Composition** High molecular weight synthetic organic fillers in the form of an aqueous solution.
- Description** A light brown liquid readily soluble in water.
- Suggested Uses** Mystolene FT is used where it is necessary to produce a tighter, fuller leather. However, its versatility is such that it may be used to achieve a pleasant and round handle even on Nappa and suede sheepskins.
- The product tightens fibre structures on grain leathers without interfering with firmness or softness of handle. A full and mellow handle can be achieved together with an increase in substance.
- Mystolene FT is particularly successful on bovine hides for heavyweight softy production where the offal areas would otherwise be of inferior quality.
- Mystolene FT is normally added prior to the fat-liquor bath and is run in the drum for 15 - 30 minutes. When the dye/fat-liquor bath is acidified finally, fixation of the Mystolene FT also takes place, unlike many organic filling and tightening agents.
- Mystolene FT gives an improvement in the fineness and evenness of the nap of suede leathers on subsequent buffing or wheeling.
- Application** Suggested application levels for Mystolene FT are as follows:
- | | | |
|--------------|---|---|
| Bovine stock | : | 5% - 7% depending upon substance |
| Ovine stock | : | 5% - 8% depending upon substance and origin |
| Suede splits | : | 5% - 7% depending upon substance |
- Handling** Avoid contact with skin and eyes.
For further information see product Safety Data Sheet.
- This product will deteriorate if frozen. Appropriate storage conditions should therefore be arranged.
