### **CATOMANCE INTRODUCES NEW LEATHER BIOCIDES**

Following detailed research, product development and tannery trials, Catomance Technologies has introduced Mystox HP.

Based on a fungicide with a very broad spectrum of activity, Mystox HP has been designed for the protection of wet skins during processing, including wet blue stock, pickled pelts and vegtanned hides. Mystox HP is supplied in the form of a self-emulsifying concentrate. It contains the well-established fungicide IPBC, which is fully supported in this application under the Biocidal Products Directive.

Mystox HP dilutes easily in water to form an aqueous emulsion, allowing even dispersion throughout the float and consistent uptake by the hides or skins. Treatment with Mystox HP imparts reliable, cost-effective protection, coupled with ease of processing and handling.
