ANTIMICROBIAL TREATMENT GAINS GROUND

Within the recently introduced range of textile preservatives and anti-microbial finishes, Mystox R has gained rapid acceptance.

Supplied in the form of an aqueous emulsion, Mystox R offers textile finishers an easily used and cost-effective treatment to prevent microbial spoilage and deterioration. The product is simply diluted in water to the required concentration prior to use and is based upon a synergistic combination of active ingredients with a broad spectrum of activity and minimal environmental impacts.

Mystox R has gained ground in the treatment of fabrics used for military applications, in emergency relief shelters and in leisure tents and awnings. It has been specially formulated to be compatible with Catomance's Mystolene MK9 to provide a single-bath application imparting water resistance as well as anti-microbial protection.
