CATOMANCE INTRODUCES NEW ANTIMICROBIAL FINISH

Catomance Technologies has introduced Mystox R30, a new addition to its range of advanced antimicrobial finishes.

Supplied in the form of an aqueous emulsion, Mystox R30 is a highly concentrated product. It provides a high level of protection against fungal attack on natural fibres in even the most extreme in-service conditions.

Mystox R30 is ideal for use in the protection of outdoor fabrics, particularly awnings and tentage. A versatile product, Mystox R30 may be applied either alone or in combination with water repellents, flame retardants and other textile finishing agents.

Mystox R30 is based on low-dose active ingredients with minimal environmental impacts and has a favourable eco-toxicological profile. The active ingredients used possess a high level of durability, resistance to water leaching and photodegradation.
