

PRESS INFORMATION

April 2009

SCOPE OF LABORATORY TESTING IS EXTENDED

With the addition of new mould growth tests, Catomance Technologies has extended the scope of its United Kingdom Accreditation Services (UKAS) laboratory facilities.

The company's purpose-built laboratories perform microbiological testing on a wide range of materials and products. This includes mould resistance challenge testing to recognised national and international standards.

Two newly accredited tests have been added to Catomance's UKAS schedule. These are:

- RTCA/DO-160F Section 13 Fungus resistance
- BS EN 60068-2-10:2005 Test J

The laboratory testing facilities at Catomance Technologies have held the prestigious UKAS accreditation continuously since 1982. UKAS is the only UK government recognised accreditation organisation for the assessment of testing and calibration laboratories against international standards. Only those laboratories which can demonstrate high standards of competence, impartiality and performance capability are accredited by UKAS.

Catomance's customers for its mould resistance challenge test services span the aerospace, aviation, electronics, automotive and defence industries internationally.

A full schedule of Catomance's UKAS accredited tests may be downloaded from the company's website at www.catomance.co.uk
