NEW PRODUCTS TO PROTECT COATED TEXTILES

Catomance Technologies has introduced a new range of products used in the protection of polymer-coated textiles.

Building on its expertise in anti-microbial finishes, Catomance's Mystox CTB Series is based on a unique combination of low-dose active ingredients with minimal environmental impacts. Mystox CTB has been specially designed for the protection of PVC coated textiles used in outdoor structures such as tents and marquees, awnings, tarpaulins etc.

The products are supplied in the form of free-flowing liquids which can be readily incorporated into the coating formulation at the mixing and compounding stage without any effect on the processing or heat stability characteristics.

The use of Mystox CTB will provide long-term protection against micro-organisms, helping to prevent surface growth, permanent staining, embrittlement of the coating and premature product failure. Mystox CTB contains a synergistic combination of biocides with a wide spectrum of anti-microbial activity and an extensive track record in protecting biologically-susceptible coatings. The active ingredients in Mystox CTB are fully supported under the EU's Biocidal Products Directive (BPD).

Mystox is a Registered Trade Mark of Catomance Technologies Ltd
