July 2008

### **A NEW BATING AGENT FOR LEATHER PROCESSING**

Catomance Technologies has developed a new bating agent to enhance its range of products used in the leather processing industry.

Mystozyme B10 Liquid is a multi-purpose, concentrated enzymic bating agent for hides and skins. Supplied in the form of a clear, brown liquid, Mystozyme B10 Liquid contains an optimised blend of proteolytic enzymes.

The enzymes are incorporated at a high concentration into a specially formulated liquid base to give excellent long-term storage stability.

Mystozyme B10 Liquid promotes efficient interfibrillary protein and scud removal. Regular fibre separation is promoted, resulting in a clean, uniform hide or skin with a high level of softness and increased tear strength.

Mystozyme B10 Liquid is a highly concentrated product with an enzyme activity of 10,000 LVU. Depending on the degree of softness and suppleness required, additions of 0.03% to 0.06% Mystozyme B10 Liquid are recommended.
