MYSTOX WFA

Textile Auxiliary Product Data

Function	Fungicide, bactericide.
Composition	Ortho phenylphenol in an aqueous solution.
Description	Clear brown liquid miscible with water. Specific gravity 1.1 approx.
Suggested Uses	Most areas of preservation where a water-soluble compound is indicated, e.g. protection of textile yarns and piece goods in a damp state or where temporary protection only is required, preservation of starches and adhesives, paints, leather and paper; also as a "disinfectant wash" for surfaces such as painted surfaces, plaster, brickwork, masonry, plastics etc.
Concentration	Conditioning of yarns 1-5gm/l in conditioning fluid. Temporary protection of textiles, leather and preservation of paper: 1-2% on dry weight. Starches, adhesives and water-based paints: 1-5% on weight of product. As a "disinfectant wash" 5% solution.
Application	Where possible treatment should be carried out by impregnation, textile piece goods for example on a padding mangle, paper at the size press and leather by dipping. Yarns of all types may be treated by licking roller on a winding frame. Where such treatment is not practicable a spray application may be used but care should be taken to achieve thorough and uniform coverage. As a "wash" for walls and paintwork the solution may be brushed or sprayed. Starches, paints and adhesives may be protected by simply stirring Mystox WFA into the product to be treated or by dissolving it in the water used in their preparation, first ensuring that the Mystox WFA is compatible with other components in the system.
Handling	Irritating to eyes and skin. Wear suitable gloves and eye protection. See product Safety Data Sheet for further information.
